

Disclosure of LCR (Liquidity Coverage Ratio) as per the requirement of Master Direction-Reserve Bank of India (Non-Banking Financial Company – Scale Based Regulation) Directions, 2023 dated October 19, 2023 - For Q2 of FY 2025-26.

The Liquidity Coverage Ratio (LCR) is one of the key ratios to measure the NBFC's capacity to meet its expected and unexpected repayment obligations arising over a shorter time frame at reasonable cost and without incurring unacceptable losses.

The LCR is calculated by dividing a NBFC's stock of HQLA by its total net cash outflows over a 30-day stress period. It requires an NBFC to have an adequate stock of unencumbered high-quality liquid assets (HQLA) that can be converted easily and immediately into cash to meet their liquidity needs for a 30 calendar day liquidity stress scenario. The objective of the LCR is to promote the short-term resilience of the liquidity risk profile of NBFCs with a view to improve the financial sector's ability to absorb shocks arising from financial and economic stress, whatever the source, thereby reducing the risk of spillover from the financial sector to the real economy.

LCR has been defined as:
$$\frac{\text{Stock of high quality liquid assets (HQLAs)}}{\text{Total net cash outflow over the next 30 calendar days}}$$

In order to ensure an orderly transition towards LCR compliance, the LCR requirements have been made binding on NBFCs by the RBI in a progressive manner starting from December 1, 2020 with minimum LCR to be maintained at 50%, progressively reaching upto the required level of 100% by December 1, 2024. The present LCR required to be maintained by GSFS, as per the proposed timeline is 100% .
